## 1. True Watermark

Immediately apparent when you hold the paper up to light. This cannot be reproduced by color copier, scanner or printer.

## 2. Void Pantograph

Some photocopies and scans will show VOID in large letters (included in our Security designs).

## 3. Chemical Protection

Brown stains and black dye appear when chemicals are used to remove/alter the check.

## 4. Toner Lock

If you print checks using a laser printer, the toner can be removed from the check very easily, allowing the payee, amount, etc. to be altered. Unless the check paper is treated with a "toner-fusing" coating such as ASAP Checks uses.

## 5. Invisible Fibers

These will glow under black light, something that cannot be reproduced.

## 6. Microprinting

The thin line under the border is actually text that is so tiny that it cannot be reproduced by copiers, scanners and printers.

## 7. Padlock

We are licensed by the CPSA to use this symbol, confirming inclusion of security features they recommend

## 8. Tracing Code

Each time we run a batch of check paper, a unique code is included on each page of that batch. This allows us to work with law enforcement to narrow down who may have made a fraudulent purchase.

## 9. Partial Features

Alerts tellers or recipients some of the security features that can be used to verify that the check is an original (some features are intentionally not mentioned to surprise a crook).

## 10. Stub/Voucher Text

Prevents a crook from getting a hold of a blank voucher/stub and using it to counterfeit a check.

## 11. TouchGuard™

The fingerprint image fades when you rub it or breathe on it, and reappears slowly after you stop.
